YES  NO  It is intended that the building described above will be constructed in compliance with the community's flood plain ordinance. The permitter may rely on community records. The lowest floor (including basement) will be at an elevation of 12 feet, NGVD. Failure to construct the building at the elevation may place the building in violation of the community's flood plain management ordinance.

YES  NO  The building described above has been constructed in compliance with the community's flood plain management ordinance based on elevation data and visual inspection or other reasonable means if NO is checked, attach copy of variance issued by the community.

YES  NO  The mobile home located at the address described above has been tied down (anchored) in compliance with the community's flood plain management ordinance, or in compliance with the NFIP specifications.

SECTION II ELEVATION CERTIFICATION (Certified by a Local Community Permit Official or a Registered Professional Engineer, Architect, or Surveyor.)  
FIRM ZONE A1-A30: I certify that the building at the property location described above has the lowest floor (including basement) at an elevation of 12 feet, NGVD (mean sea level) and the average grade at the building site is at an elevation of 12 feet, NGVD.

FIRM ZONES V, VI-U30: I certify that the building at the property location described above has the bottom of the lowest floor beam at an elevation of 12 feet, NGVD (mean sea level), and the average grade at the building site is at an elevation of 12 feet, NGVD.

FIRM ZONES A, A99, A0, AM, and EMERGENCY PROGRAM: I certify that the building at the property location described above has the lowest floor elevation of 12 feet, NGVD. The elevation of the highest adjacent grade next to the building is 12 feet, NGVD.

### SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect)

I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is watertight, with walls substantially impermeable to the passage of water and structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures, velocities, impact and uplift forces associated with the base flood.

YES  NO  In the event of flooding, will this degree of floodproofing be achieved with human intervention? (Human intervention means that water will enter the building when flood up to the base flood level occurs unless measures are taken prior to the flood to prevent entry of water (e.g., bolting doors/windows over doors and windows).)

YES  NO  Will the building be occupied as a residence? If the answer to both questions is YES, the floodproofing cannot be credited for rating purposes and the actual lowest floor must be completed and certified instead. Complete both the elevation and floodproofing certificates.

FIRM ZONES A, A1-A30, VI-U30, A0 and AM: Certified Floodproofed Elevation is 12 feet, (NGVD).  
THIS CERTIFICATION IS FOR SECTION II  BOTH SECTIONS II AND III (Check One)
